LECTURE SERIES: SCIENCE OF SCIENCE IN THE SPOTLIGHT

Science as an engine of progress and progress of science

ABSTRACT

In order to help solve increasingly complex problems and questions, contemporary science has adopted new approaches to knowledge production that are predominantly team based and are less confined by disciplinary boundaries. The study of the character of and the interplay between the social, institutional and intellectual aspects of science has recently received a major boost. In this talk I will showcase some of the studies that use the data from scientific publications to shed light on contemporary research practices, research teams, research workforce, interdisciplinarity, and citation dynamics.

SPEAKER

Prof. Dr. Staša Milojević,

Professor of Informatics, Professor in the School of Informatics, Computing, and Engineering, Indiana University Bloomington
