

## MASTER IN LOGISTICS AND SUPPLY CHAIN MANAGEMENT

The MIT SCALE programme in Logistics and Supply Chain Management is a partnership between the University of Luxembourg and the Massachusetts Institute of Technology Center for Transportation and Logistics. Its curriculum emphasises analytical problem solving, leadership, and communication skills.

### STRENGTHS

- The programme prepares students both with strong analytical skills and leadership skills in a small class size;
- Each student has the opportunity to complete a master thesis project in collaboration with an industry partner and with supervision of a dedicated faculty member;
- Students visit the Massachusetts Institute of Technology for 3 weeks in January and receive a Global Logistics Supply Chain Management Certificate, awarded by MIT Global SCALE Network, upon graduation.;
- In the summer semester, electives allow students to put emphasis on some specialty such as procurement, transportation or analytics.

### ADMISSION REQUIREMENTS

- Master's equivalent degree, or a 4 or 5-year Bachelor's degree (a minimum of 240 ECTS). Alternatively, candidates with a 3-year Bachelor degree (180 ECTS) might be admitted, if they have gained sufficient work experience that is deemed relevant and equivalent to the missing 60 ECTS.
- English level C1;
- Aptitude for analytical thinking, demonstrated by undergraduate degrees in disciplines such as engineering/economics/physical sciences or by scores on standardized tests (GMAT, GRE) or successful completion of the MIT online course in Supply Chain Analytics.

MIT SCALE programs value diverse backgrounds of applicants (<https://www.edx.org/course/supply-chain-analytics>).

### PROGRAMME AT A GLANCE

**Duration:** 10 months (60 ECTS) including a 3-week stay at MIT in Cambridge, USA

**Language:** English

**Registration fees:**

- 12.000€ per semester with attractive scholarship opportunities

**Application period:**

- For EU students: February > June
- For non-EU students: February > April

**Campus:** Kirchberg

Joachim ARTS  
Programme director

"Logistics and Supply Chain is the area of management where leadership skills and analytical decision-making come together. Supply chain and logistics managers inspire the people that operate in each link of the supply chain and make decisions based on facts and analytics. The curriculum of LSCM prepares candidates to excel at both. Our students go well prepared to MIT in January to further expand their network, preparatory to running global supply chains after graduation. The graduation projects are supervised by a dedicated faculty member courtesy of the small scale of the program. After graduation you will be ready to innovate, impact and inspire."
